Install Photoshop by downloading the installer file and using the In-Mac App Store installer for the latest version of Photoshop (until version 25.1, the In-Mac installer was the only way to get the latest version of Photoshop). To check the available versions of Photoshop and which is the latest, use the link above. Open the application you installed and create a new document. The default location is Photos/, but you can change it by choosing New/ and then New Document. After a few

moments Photoshop will open and create a new document. Now you need to name your document. You can choose a new name or use the default name—psd. Next, make sure that Save As is selected and then click the Browse button. This opens the Save As dialog. Using the file-name text box, type a new name for the file.
